

# CO<sub>2</sub>OLrac<sup>™</sup>

## CO<sub>2</sub>OLrac™ – G4

- 30kW cooling capacity
- Optional dual coil 'N+N'
- Dual 'A+B' power supply
- LED indicator + BMS interface:
  - Fan failure
  - CO<sub>2</sub> isolation
- Leak detection & automatic CO<sub>2</sub> isolation
- Off coil temperature monitoring + BMS interface

### **Next developments:**

- 40kW+ cooling capacity

CO<sub>2</sub>OLrac™

**47U x 800mm rack**

## CO<sub>2</sub>OLrac™ - CABINET COOLING

### Design basis:

- Absorbs heat
  - Does not provide cooling
  - CO<sub>2</sub> at 14°C, 49Bar(A)
  - Above dew point
- Air drawn into cabinets by 'blade' fans
- Heat absorbed via CO<sub>2</sub> heat exchanger
- Off cabinet air temperature is 'room neutral'

## CO<sub>2</sub>OLrac™ - CABINET ACCESS

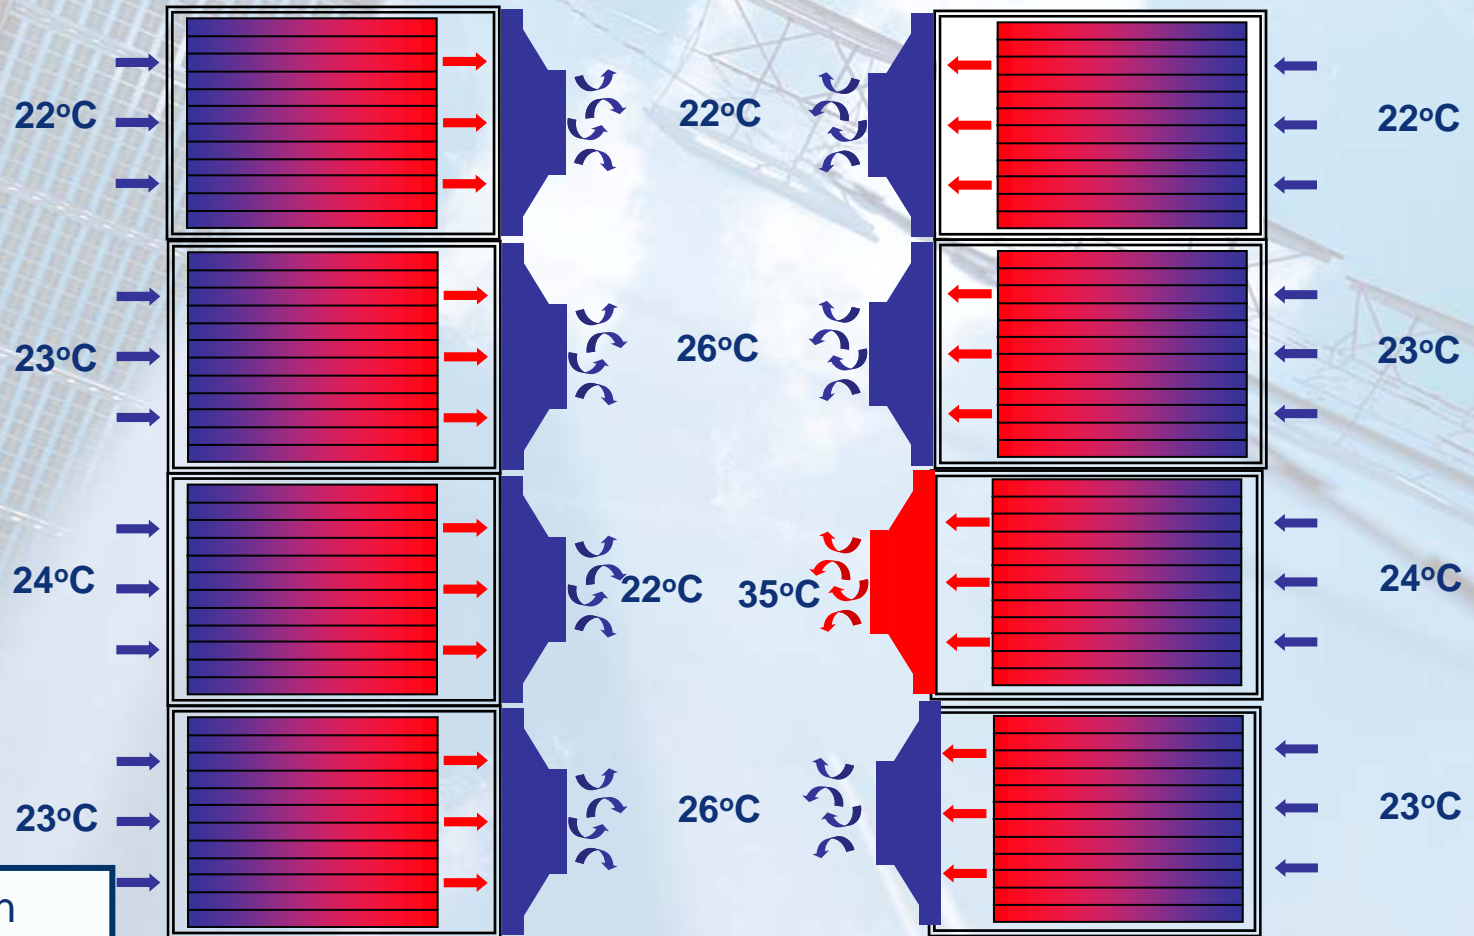

- Access via rear hinged door
- Blade load discharged
  - 60/70% into CO<sub>2</sub>OLrac:load absorbed
  - 30/40% into aisle
- Local ambient temperature + 2°C
- Increased temperature differential
- Self compensating system

## INTRINSIC RESILIENCE : SITUATION NORMAL

## INTRINSIC RESILIENCE : FAILED CO<sub>2</sub>

- Heat absorption
- 50% CO<sub>2</sub> overfeed
- Open Architecture

## CO<sub>2</sub> GAS DETECTION

Beacon and Sounders

Room sensor

Gas Detection Panel

Gas Detection Chamber

## PIPEWORK & CONNECTIONS

**N + N power & cooling connections**

**N + N distribution system**

## WHY CARBON DIOXIDE?

➤ High capacity cooling

➤ CO<sub>2</sub> is electrically benign

➤ Smaller pipework & coils

The latent heat capacity Carbon Dioxide is 182kJ/kg compared to the specific heat capacity of H<sub>2</sub>O = 4.2kJ/kgK, which means that:

- 1kg CO<sub>2</sub> absorbs 182kJ of energy in its 'phase change'
- 1kg of H<sub>2</sub>O absorbs 4.2kJ of energy for 1°C temperature rise:
  - CHW flow/return 6/12°C 1kg H<sub>2</sub>O absorbs 25.2kJ
- Therefore 1kg of CO<sub>2</sub> absorbs 7 times more energy than water:
  - $182\text{kJ} / 25.2\text{kJ} = 7.22$

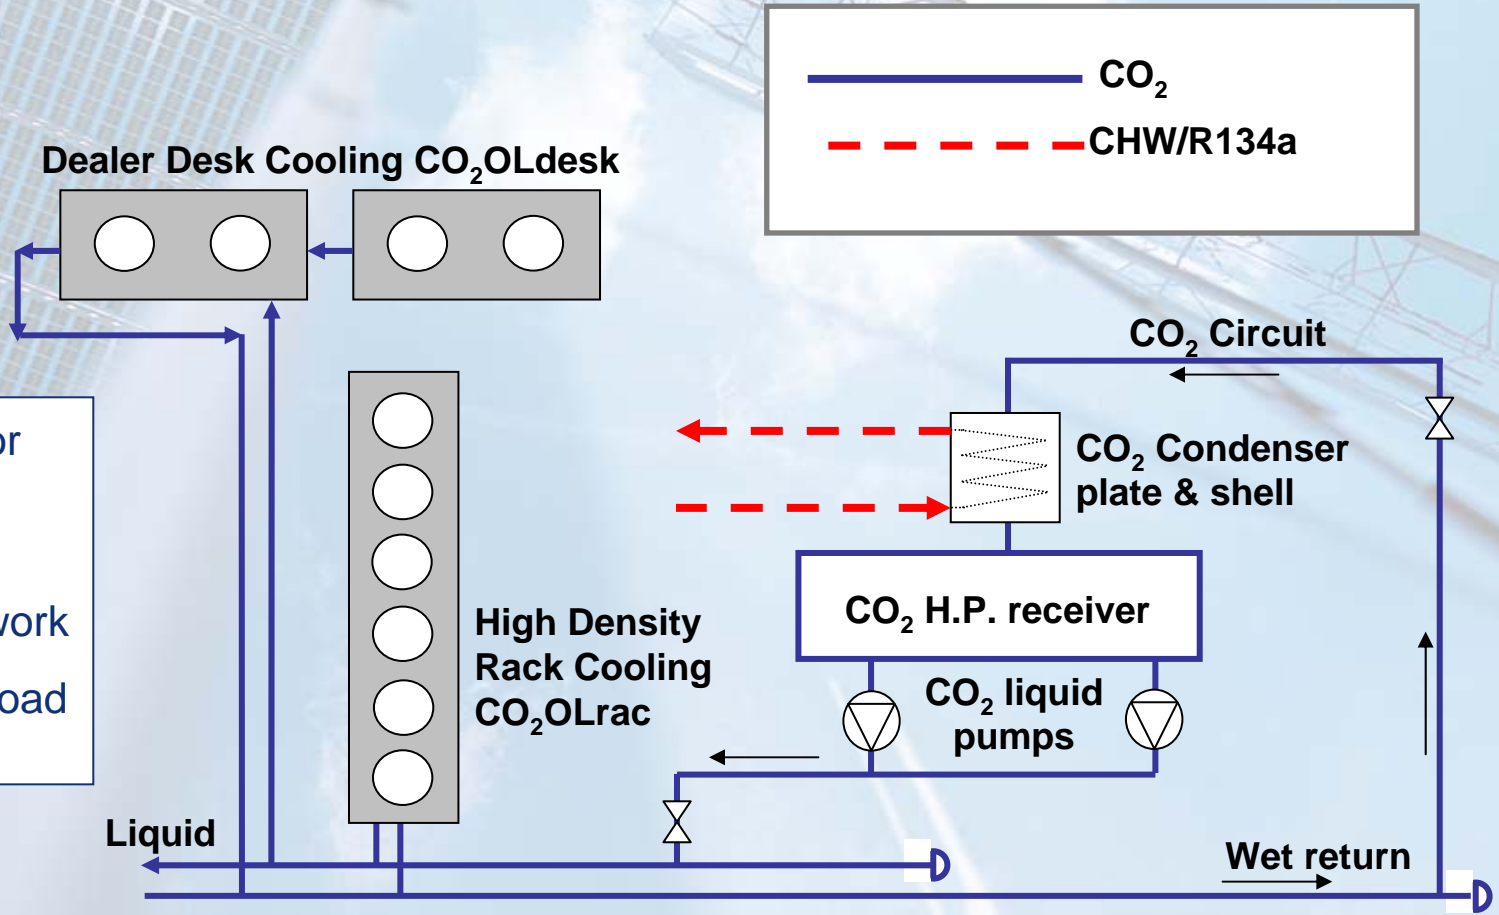

➤ Reduced pumping power

➤ Reduced CO<sub>2</sub> footprint

➤ Recycled CO<sub>2</sub>

# CO<sub>2</sub>OLrac™ SCHEMATIC – SECONDARY VOLATILE CO<sub>2</sub>

- Primary CHW or Refrigerant
- Valve free distribution pipework
- Self balancing load driven

# N + N : CO<sub>2</sub>OLairpac™, PIPEWORK & COILS
